

SAFE SHARPNESS

MADE IN GERMANY

Why should CUTX safety knives also be used in your company?

The use of safety knives is not only active accident protection, which is even specified depending on the industry, but also saves you unnecessary expenses every day. By using safety knives to protect your employees and goods from injury or damage, you will not incur costs due to lost work or processing damage, nor will you have to replace damaged goods. A safety knife comes in different safety levels or safety techniques.

NEW BRAND – LONG TRADITION

You get the maximum protection against injuries when using safety knives with concealed blade.

VARIOCUT X7070
